To be safe, explicitly specify A target is said to be within scope of scope if the following algorithm returns true: • Let scopePath be the elements of scopes's, separated by U+002F (/).. This specification also defines the manifest link type as a declarative means to associate a document with a manifest.. For example, if is /pages/welcome.html, and is missing, the navigation scope will be /pages/ on the same origin.. The URL string matching in this algorithm is prefix-based rather than path-structural (e.. To avoid unexpected behavior, use a scope ending in a / If the 's' is not of the 's' manifest, the user agent SHOULD show a prominent UI element indicating the, or at least its, including whether it is served over a secure connection.
